

Attached pictures:

1. Bellow made of exclusive translucent fabric, complying with the highest safety and application approvals in the automotive field, providing extra brightness inside the vehicle for extreme comfort.
2. PEI Mobility provided 8,000 bellows in Europe and around the world
3. Unique, patented bellow bottom fixing system. Thanks to the special zips, the fabrics of the two parts remain on the same plane, avoiding the tension created by radial forces that can damage the product
4. Connecting clips between bellows. Patented system allowing quick and easy installation, durability and the possibility of customisation by the customer.
5. The SMC technology combines the lightweight advantages of composite materials with the requirements of industrial serial production.
6. PEI Mobility's **NEW CONCEPT** is based on advanced technology: a Full Carbon articulation.
7. Steel articulation joint with forward pitch axis.
8. Complete system with fixing brackets ready for assembly of all cables between carriages.
