PRESS RELEASE

PEI MOBILITY: THE BUSINESS UNIT OF P.E.I. SRL REDEFINES THE STANDARD OF THE GANGWAY SYSTEM

PEI Mobility is a brand of **P.E.I. Srl**, a leading company in the field of **dynamic protections** for machine tools. Born and raised in a context of excellence - **the Motor Valley** - the company has specialised, during its twenty years of experience, in the production and sale of **bellows for articulated buses** and today presents itself with an important **expansion of its product range**.

Years of activity and success in the sector have led PEI Mobility to currently count **8,000 bellows** in Europe and around the world, earning it a leading position on the international scene. A result also achieved thanks to the help of the two foreign production plants, one in **Serbia** and the other in **Brazil**, which report to the headquarters in Bologna.

On the strength of its proven bellows production, characterised by a high **technological level** in terms of the **fabrics** used, the number of **patented systems** and its ability to customise, the **PEI Mobility** brand now presents itself to the market with a major production novelty: a **range of innovative, high-performance joints**. Thanks to cutting-edge materials, such as the introduction of **short carbon fibre** with the **SMC** technique, and its **compatibility** with all types of **chassis**, the new PEI Mobility joints now offer unique solutions on the market in terms of lightness and flexibility.

This new **positioning** expresses a now well-defined mission for the renewed business unit: to become a reference player for the complete supply of **gangway systems**, with a focus on **sustainable mobility**.

With a new digital image, the Group's BU has also landed on social media with the opening of a **LinkedIn channel** and on the **web** with a new **official website**, featuring an innovative tool that allows you to configure your own interconnection system for articulated buses by combining a wide range of **bellows, joints** and **accessories**, right up to complete **gangway systems**.

Its membership of a leading Group such as **P.E.I. Srl**, with **420 employees** located in **7 production sites** in Italy and abroad and **70 international patents**, its **customised approach to the customer** and close **synergy with the local area** mean that PEI Mobility is ready to meet the needs of its target, setting out on the road to a future full of opportunities.
