PRESS RELEASE

October 2023

PEI MOBILITY: THE BUSINESS UNIT OF P.E.I. SRL WILL EXHIBIT AT THE BUSWORLD EUROPE 2023

PEI Mobility, a major player in the field of Italian-made bellows and articulations, has confirmed its participation in Busworld 2023, which will be held in Brussels from 7 to 12 October 2023.

The automotive division of P.E.I. Srl will present itself to an international and highly specialized audience at the most important B2B event dedicated to the bus and coach sector in Europe.

Thanks to constant commitment to innovation, **PEI Mobility** has become a reference point in this industrial branch, offering a comprehensive range of products suitable for any type of chassis, while ensuring a high level of customization to meet every customer's need.

Actually, in addition to the already established production and sale of bus bellows (10,000 units to date), started twenty years now, the available range of articulations has proven to be particularly interesting, providing the market with new products both in terms of production technology and function.

One of the novelties that **PEI Mobility** will present at Busworld concerns the range of articulations, introducing a new joint dedicated to 'puller' vehicles with a different traction system.

For this category of buses, a simpler articulation, which does not require a specific damping system and a stability control device, can be anyway effective.

PEI Mobility has thus introduced a more essential but technologically advanced product, able to meet completely the needs in this category of vehicles, currently mainly represented by full electric buses and Bus Rapid Transit (BRT) systems.

Like the other articulations produced, the latest addition has also been designed to meet every customer's requirement, offering as well a high level of customization.

Other product innovations will be featured at the Stand: the R&D department of **PEI Mobility** has recently carried out important studies on the use of innovative materials and developed new performing solutions that further broaden the product range.
